

Paper cup machine - SAS PC1000i

We are the only Indian [paper cup machine](#) manufacturer, producing completely indigenous machines for the past 10 years. Our machine, the SAS PC1000i which is a highly successful and high quality machine with 100% Indian components has crossed hundreds of installations across the country with a big list of happy customers.

As our machine comprises the best of Indian components from Siemens, ABB, Rolon, LGB & TVS, the availability of spares is never an issue. With our wide service network across the country and with experienced engineers, the machines downtime is effectively reduced proving high value on investment and success to our clients business.

Surpassing the quality standards of similar imported machines, we have established ourselves as a leading [automatic paper cup machine](#) manufacturer in India. Due to complete localization & indigenisation of our machines, our customers enjoy assured after sales service support, low maintenance costs and uninterrupted production.

[Paper cup machinery](#) market in India is flooded with numerous imported Chinese machines. Importers all over the country distribute Chinese machines in the market. The downside of these machines are usually the availability of spares, components and proper service backup. As there are no standard models that are established, and as newer models come with different spares & components, it becomes expensive and difficult to maintain the imported machines. Here is where the SAS PC1000i scores over the imported machines. As our [high speed paper cup machines](#) are completely indigenous and makes use of the best locally available spares and components along with a wide network of service backup, we prove value for our clients investment.
